Lab 8

Pseudocode

Function enqueue: $O(1)$

Add to the first stack

Increase size

Function dequeue: $O(n)$

//So the elements are in queue order

Move all elements from the first stack to the second stack

Pop the top element of the second stack

Move all elements from the second stack back to the first stack

Function front: $O(n)$

Move all elements from the first stack to the second stack

Get the top element

Move all elements from the second stack back to the first stack
